

REACH-SVHC certificate

Poncin 2nd of September 2019

Dear Sir, Dear Madam,

As a supplier of chemicals, TIFLEX agrees with the obligations of REACH regulation on Registration, Evaluation and Authorization of Chemicals (EC Regulation 1907/2006 came into force on 1 June 2007).

Our attention is not focused only on our Company's role as a supplier but more generally on the possible impacts for our own customers.

REACH requiring exchanges of information throughout the supply chain, TIFLEX decided to communicate regularly with customers about the two points below.

Communication on the presence of SVHC substances:

The presence of SVHC substances contained at more than 0.1% in our products is specified in our MSDS (section 3), which are sent automatically with your first order.

The list of SVHC is analysed regularly to identify any substances used by TIFLEX. So far, all of our manufactured products don't contain more than 0.1% of substances SVHC except for: **332**96 Hardener EP 6969 and 354**47 Metallic Silver Paste (CAS 107-15-3).**

Communication on the substances registration:

All substances included in our manufactured or marketed products by TIFLEX are compliant with REACH regulation in force.

Best Regards

Catherine CARRESI - QSE Manager – REACH contact
